

# Keeping your waterways open & nature thriving

Beavers are nature's tireless builders, but their dams can disrupt essential infrastructure. Beavercone's culvert protection systems ensure uninterrupted water flow, reduce costly repairs, and safeguard ecosystems.

## Beavercones

Beavercones prevent beaver interference and debris blockages, ensuring continuous water flow. Their rugged, galvanized steel design and smart cone keep maintenance low and performance high. Protected under Canadian Patent #2,518,572 and U.S. Patent #US 7,441,989 B2.

## Installation

Our simple installation process starts with a prepped site and secure mounting over the culvert. A quick setup – two chains that bolt to the culvert – ensures long-term reliability and minimal upkeep. The result is a low-maintenance solution that works with nature, not against it.

## Why choose Beavercone

### ECO-FRIENDLY ENGINEERING

Our products are fabricated to protect and enhance aquatic habitats, ensuring that fish and other wildlife can navigate waterways freely.

### COST-EFFECTIVE PROTECTION

By preventing the severe damage caused by blocked culverts, Beavercone helps you avoid millions in repair costs.

### PROVEN RELIABILITY

Trusted by communities and dealers alike, our solutions deliver consistent performance, even in challenging conditions.

# Engineered for uninterrupted water flow

Beavercones are designed to keep beavers and debris at bay, ensuring your culverts remain clear and water flows freely. Fabricated from rugged, galvanized steel, our cones offer a robust, eco-friendly solution that protects your infrastructure and the environment.

## Smart design for maximum efficiency

### PREVENTS BLOCKAGES

An innovative cone shape discourages beaver entry and debris accumulation.

### ECO-FRIENDLY

Maintains a natural aquatic environment by allowing fish and other species to pass through undisturbed.

### DURABLE & VERSATILE

Available in any size you need—with standard sizes ready for immediate shipping—and engineered to handle tough conditions with minimal maintenance.

### QUICK INSTALLATION

Streamlined setup gets your culverts operational in less than an hour, reducing downtime and maintenance costs.

Trusted by those who shape the landscape – naturally.
